

OPUS

The heart and soul of your home

With Opus' award winning multi-room entertainment system your dreams can become reality

Bedroom

Bathroom

Study

Just imagine...

Watching the latest blockbuster
in your home cinema...

...then retiring to the bedroom
to catch the finish

Immersing yourself in the news
whilst you shower...

...but through hi-fi quality speakers
instead of a tinny radio

Catching-up with the latest
tunes in the kitchen

...with no stereo to clutter
the worktop

Kitchen

Enjoying your iPod's entire
music collection...

...through virtually invisible ceiling
speakers in the dining room

Dining room

Be a perfect host

Start the movie in the living room and catch the finish upstairs

Access your iPod's entire content from any room!

Lazy mornings don't get any better than this

What is a multi-room system?

TV, video, music and much more, when and where you want it, with no wires or ugly black boxes normally associated with great sounding home entertainment... Your dream becomes reality!

Ever started watching a movie in the living room but it gets too late and you want to retire to bed? Maybe you have a DVD player and TV in the bedroom... But imagine being able to access your entire movie and music collection from any room, without the need for separate home entertainment systems or having to locate your favourite DVDs and CDs.

Total flexibility...

A properly planned and installed multi-room system will offer you access to your music and movie collection in any room you choose – even the garden and garage. No 'tinny shower radio' to contend with in the bathroom and think of the extra space you'll gain in the kitchen without that micro system taking up valuable worktop space.

Tell me how it works...

Now think of all the time you've wasted looking for CDs and DVDs. With a multi-room system all your content is stored centrally and digitally in one chosen location and can be accessed using wall mounted keypads and remotes.

Different music and video can be experienced in different rooms at the same time or maybe you're having a party and want the same music in the living room, kitchen and hall? All this is possible thanks to Opus multi-room entertainment.

Relaxing classics as you unwind after a busy day

Experience an entirely new quality of bathroom entertainment. Choose from background music or maybe catch the news on your bathroom TV

And that's not all...

How many times have you wished that great hi-fi sound didn't mean ugly black boxes, ungainly speakers and all that wire spaghetti?

All this is history with a multi-room system because all the control components and sources such as music and video servers, DVD players, tuners and even your iPod are located away from view in one centralised service area and connected to each room using hidden cables.

Whether you're refurbishing or buying a new property, isn't it time you installed an Opus multi-room entertainment system in your home?

Don't just take our word for it!

We're totally passionate about Opus but it's difficult to be objective when you know the products so well: even if we do benchmark all new developments against our stiff competition. So it's great to see the experts from the press getting as excited about Opus as we do! Indeed we have received some great reviews with publications praising both the system's ease of use and attractive features.

“Combining a fine sound with the ability to give you music all round your home, this is a fine solution to many an enthusiast's dream.”

What Hi-Fi? Sound and Vision (Ultimate Guide)

“Thanks to the Opus system's extremely simple cabling scheme, installation is astonishingly straightforward, while the system itself is by far and away the most intuitive and user-friendly design around.”

Opus around the world

While you might be new to multi-room entertainment, Opus certainly isn't!

Opus has been at the forefront of multi-room entertainment for many years and has been installed in thousands of the world's most prestigious properties and landmark developments.

In fact you've probably been in Opus equipped homes without even knowing it.

For today and tomorrow...

The reasons the world's leading developers specify Opus are simple; it's cost effective, straight-forward to install, offers a wide variety of options for any home design and has an enviable reputation for reliability. An Opus system is designed with many years' pleasure in mind. As technology advances you can simply add new components to your Opus hub. These are connected and commissioned by your Opus installer and are designed to integrate perfectly with your entire system.

Installing Opus in your home is not only great for you but can be hugely advantageous when the time comes to sell. Prospective buyers simply love the value it adds and thanks to Opus' structural design, it's virtually future-proof. All in all, once you experience Opus, you'll find it hard to believe you ever lived without it!

'Having installed Opus for a number of years SMC CI has no hesitation in recommending the system to customers based on its strong combination of functionality and affordability.'

Is Opus right for me?

Whether you live in an apartment, a palace or a townhouse, there's an Opus system to suit. And it's not just about music and movies. Opus offers a raft of life enhancing features.

By now you'll understand the benefits multi-room entertainment can bring. But Opus is no ordinary multi-room entertainment system.

Because every customer's needs are different. Opus systems offer a huge degree of flexibility and are designed to maximise your specific music and movie demands. But just as importantly, all Opus products can be integrated with a wide array of other manufacturers' smart home products should you choose.

Opus' design philosophy...

Of course one of the most important things about technology is how easy it is to use for all the family. Our continued research tells us that customers don't appreciate the over-complexity of many of today's gadgets and they certainly don't want a clutter of control panels on the walls of their homes. That's why all our keypads are extremely simple to operate and why we've made it possible to control other systems in your home – such as scene programmable lighting, iPods, CCTV as well as curtain/blind control and air conditioning – from your Opus keypads.

And to ensure you enjoy reliable entertainment for years to come, every single Opus product is tested to the rigours of every day abuse and way beyond! Our factory is ISO9002 certified and for complete peace of mind, every system is signed-off by an Opus Certified Installer and issued with a no quibble guarantee.

The perfect finish...

Designing the perfect Opus system takes specialist knowledge and considerable expertise. That's why we only appoint Opus Certified Installers after rigorous evaluation and training. Their knowledge of

the Opus range, the very latest in cutting edge entertainment technologies – such as music and video servers – plus custom installation expertise makes them the only people we trust to deliver the ultimate Opus experience.

So whether you're a movie buff, an avid TV fan, a classical music aficionado or someone who insists on having the latest future-proof technology in their home, you're in great hands!

No need for headphones! Now you can access and enjoy content from your iPod in any Opus equipped room

Your Opus dealer will demonstrate how other learning remotes can integrate seamlessly within your Opus system

Opus – the gateway to your smarthome!

Opus isn't just about sound and vision, it's also designed to seamlessly integrate with other smarthome systems.

So as well as using your Opus touchscreens to operate audio and video, you can control the lighting, temperature, open blinds and curtains, and even monitor your home's CCTV system from the touchscreen. All this, without the need for multiple keypads cluttering your walls.

It's also possible to integrate the most sophisticated touchscreen remotes into your Opus system.

To ensure Opus is compatible with a multitude of third party systems, our Integrated Partner Programme keeps Opus at the vanguard of innovation.

Fingertip control with the new Opus touchscreen

Opus' stylish touchscreen is available in a wide variety of finishes thanks to a range of easily changeable faceplates

Using your Opus system

Fingertip control of your Opus system comes courtesy of stylish and highly intuitive keypads and remotes.

Introducing the new Opus touchscreen

Key to the sophisticated elegance and simplicity of Opus is the stunning new touchscreen control panel. Offering full control of your Opus system, as well as other brands' products (curtains, lighting etc) this incredible interface will wow you and your friends thanks to its tactile, simple to operate design.

Style and functionality operate in perfect synergy with this intuitive keypad which features a crisp high-contrast 3.5" full colour LCD touchscreen display with an incredibly wide viewing angle. Offering a huge array of control it can be fully customised for the fastest access to your most frequently used functions and can even be personalised with unique icons and screens.

Video playback enables you to cue-up movies and even watch content from your iPod or MP3 player*.

Adjustments can be made via a user menu which offers fine tuning of bass, treble and balance.

Other clever features include the flush interchangeable faceplate with colour options to suit every environment. And a built-in clock/timer means you can wake-up to a favourite radio station without the need for a separate alarm clock.

When it's time to celebrate the touchscreen comes into its own; Opus party mode means you can set your system to play the same music in every room when entertaining.

If you already have an Opus system in your home, this stunning keypad can usually be retrofitted to give your system a refresh.

Classic keypads

We recognise that you may not have the need for such an advanced interface in every room. That's why we also offer a range of easy to use yet highly attractive traditional keypads. Like the touchscreen these offer full control over your Opus system and a number of custom fittings are available to enable lighting and curtain/blind controls to be contained within the same single faceplate.

Opus' stunning aluminium encased remote offers elegant, tactile simplicity

Remotes

Opus offers two dedicated remote controls – perfect for operating your multi-room system from the comfort of your armchair and when relaxing in bed.

As well as our own beautifully ergonomic designer aluminium handset and intuitive learning touchscreen remote, Opus also recommends a number of third-party colour touchscreen remotes. These are particularly adept at controlling sophisticated source equipment such as video servers and for centralising control of CCTV and ambient lighting.

Enjoy your iPod playlists in every room as you entertain...

* Requires additional wiring

It's all hidden away...

The heart of your Opus system is something you won't see very often!

With Opus, there are no ugly boxes of electronics or cables to clutter your home. Instead, the Opus hub – essentially the heart of your multi-room system – is hidden out of view (normally in a cupboard). This is joined by a host of products known as source equipment. These include music and video servers, tuners and other music and video sources which you will be able to fully access from keypads and remotes in each room.

From the cupboard, bespoke Opus cables travel through the walls and ceilings in your home to transmit audio, video, two-way command signals and power to the keypads, amplifiers and speakers in each Opus equipped room.

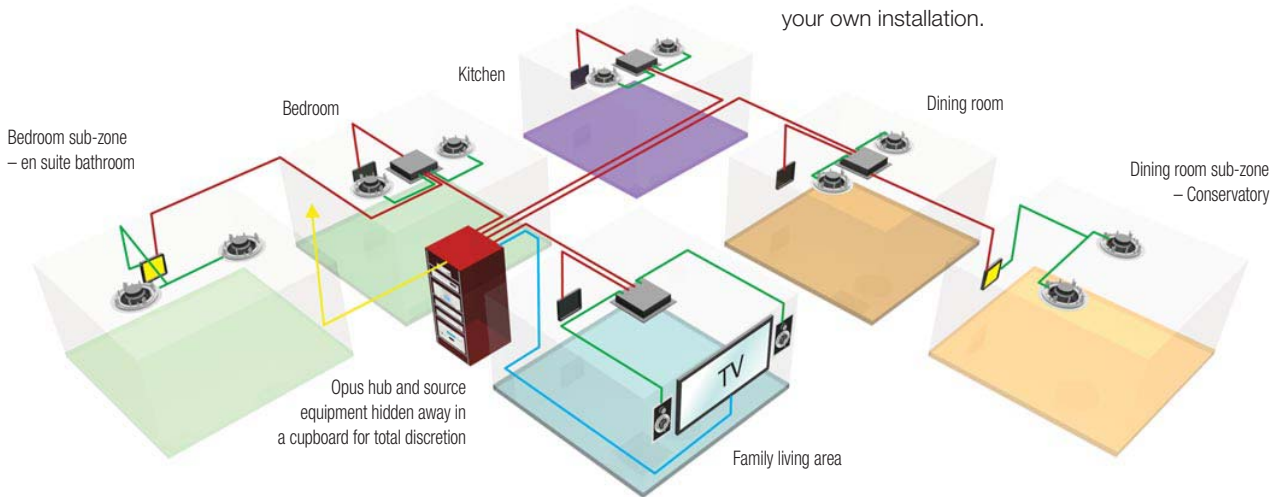

The Opus audio and video hubs plus all source equipment are located out of view – control is afforded from each room

Can Opus be installed in every room?

The extent of Opus' inclusion in your home is down to you. A standard system will serve four independent rooms (generally referred to as zones) plus an additional four other rooms allowing you to share music and video sources with the main room (these are known as sub-zones).

However it's common to specify a system capable of providing coverage to significantly larger properties. In fact Opus will concurrently serve up to 24 zones plus 24 sub-zones with hi-fi quality music and crisp video! Your Opus Certified Installer will be able to answer any question about your own installation.

Legend:

- Loudspeaker cable
- CT100/RG 6 (to TV or radio aerial)
- OPUS BTC1 Balanced Transmission Cable
- Coaxial cable or Cat5e using a video-over-Cat5 balanced pair
- WCU600 zone control keypad
- WCU300 sub-zone keypad
- Opus wall speakers
- Opus ceiling speakers
- Opus DZM20 or DZM100* amplifiers
- Cupboard

Opus system diagram (simplified) – Opus can be shared with any room in your home. Your dealer will provide you with options to suit your property.

Audiophile sound and razor sharp vision!

'Opus sounds simply incredible, but how?'

One of the first things that strikes people experiencing Opus for the first time is just how amazing it sounds. They wonder where it's coming from? Most Opus systems employ virtually invisible in-ceiling speakers which have been carefully designed to deliver a rich, deep and involving soundstage. Additionally, powerful yet efficient amplifiers are located behind the speakers – normally within ceiling voids.

Get the picture

They say a picture tells a thousand words and with Opus you'll be able to experience the clearest images in any room in the house – all transmitted from one central location. Never again will you have to ensure satellite boxes and DVD players are mated to individual TVs. With Opus you can enjoy any video source in any room.

So next time you wish you could catch the rest of the movie in bed... you'll be able to thanks to Opus!

Flexible loudspeaker solutions to suit all environments

Appreciating that not all needs are the same, we have a wide range of in-ceiling and in-wall speakers to suit all rooms and uses. For example you'll need a high performance speaker system in your home cinema capable of flexing its muscles

across the musical spectrum – one that can deal with the lowest bass notes in movies plus the delicate, crisp detail when delivering opera. But in your dining room, a simpler in-ceiling speaker designed for ambient music may possibly suffice.

Opus audiophile in-ceiling speakers

The compromise is over... now you can have the ultimate in sound and complete discretion! These flagship in-ceiling designs feature a raft of audiophile components including an 'eyeball' tweeter to deliver clear treble exactly where it's needed.

Custom designed in-wall speakers

Astonishing power and refinement comes courtesy of this and other custom-designed in-wall models. Faithfully reproducing all your favourite music and movie tracks, you'll never need to visit the cinema again!

Exterior loudspeakers

Why confine your Opus system to the house? These corrosion resistant, high specification exterior speakers are perfect for the terrace or by the pool and can be over-painted to suit your décor.

Pool-side

Three simple steps

Expert planning and installation by one of our qualified Opus Certified Installers will give you total peace of mind.

Planning and installation

Just because it's at the cutting edge of technology doesn't mean it has to be difficult.

Adding an Opus system is as easy as 1-2-3!

1 Consultation

Like any multi-room entertainment system, Opus must be expertly planned to ensure you get the very best out of your investment. It's also vital that the installation itself fits in perfectly with the looks of your home so your Opus system is an absolute pleasure to live with.

By working closely with your Opus Certified Installer you can be assured of the very best attention and of course the perfect result.

Before choosing your exact system they will be able to talk you through all the options available to ensure Opus is installed in every room it might be required and maybe in the garden too!

2 Installation

Once you're completely happy with your planned Opus system, installation can take place.

Completion time depends on many factors – not least your exact system specification and whether your property is new-build or if a retro-fit installation is needed. Throughout the process, you'll be kept fully apprised of progress and consulted where necessary.

Living room

All Opus Certified Installers are fully trained in planning, installation and commissioning our systems

3 Commissioning

This is the final stage and involves installation of all your source components (video servers, music servers etc) and programming of keypads and remotes. Once your installer has performed a full function test you will be given the opportunity to learn exactly how everything works. Before sign-off, your Opus Certified Installer will answer any questions you have and make sure you're completely comfortable with every aspect of your system.

As well as a no-quibble guarantee, you'll also have access to a fantastic Opus support programme through your Certified Installer.

So it's time to say goodbye to the clutter of conventional hi-fi and other entertainment equipment in every room, the piles of CDs and DVDs scattered around the home and bid that wire spaghetti a fond farewell.

Instead it's time to welcome Opus and a whole new world of multi-room entertainment into your home!
